

Target:

1. Use the SQL REPLACE function within SQL code.
2. Use the CONCAT function and || operator within SQL code.
3. Recognize the meaning of the acronyms ETL and ELT.
4. Use the worksheets area to load a text file into a Snowflake worksheet.

Others:

- Basic Function syntax
- Using required and optional arguments in the REPLACE function
- Renaming a column in a SELECT statement using "AS"
- The difference between a SQL SELECT statement and a SQL UPDATE statement
- Using the double-forward slash "/" to put notes or comments into code
- Mapping ETL concepts into different lines of a SQL UPDATE statement

REPLACE (<subject>,<pattern>[,<replacement>] }

REPLACE FUNCTION ARGUMENTS:

SUBJECT - Where to look

PATTERN - What to look for

REPLACEMENT - What to replace it with (optional)
